Bridging the Gap between Educational Psychology and Information Sciences – Topic Maps in ELearning

Vivek Venkatesh
Concordia University
Montréal, Québec
Canada
Overview

- Graduate Writing Instruction
- Course Management Systems
- Falling short with Educational Theories
- Cognitive Information Retrieval
- Topic Map Solution
- Results
- Future Instantiations
Graduate Writing Instruction

- ELearning Course
- Essay Writing Tasks
- Extension of theories
- Real-life applications

- 33 learners – 132 essays
Course Management Systems

- Indexing of course-related material
- Articles
- Student Artifacts
- Grading Scheme
- CANARIE project
Falling Short

- Theories of Learning
- Self-Regulation
- Task Understanding
- Assessment Criteria
- Meeting Instructor’s Standards
Cognitive Information Retrieval

- Library and Information Sciences
- Ingwersen (2000)
- Cognitive Space
- Socio-Contextual Environment
- Work Task as Unit of Analysis
- Problem Representation Research
Topic Maps in Education

- Ontopia’s OKS
- Academic License

- Funding
  - Government of Québec
  - Concordia University
Development

- Subject Matter Experts
- Stakeholders – Students, Professor

- Categories distilled to indexes
- Author, Subject, Grade
Research Study

- Three instantiations of ELearning Class
- Total of 28 students
- Essays, Performance and Confidence Predictions
- Tracking Data
  - UserID, Date, Time, Site Visited
- Time Line Interviewing
Preliminary Results

- Trend Analysis
  - Performance Improvement
  - Prediction Discrimination Bias
  - Confidence in Predictions
- Individual Motivating Factors
- Perceived Learner-Learner Interactions
- Instructor – Learner Interactions
Implications

- Enriching views of content
- Flexibility and Scalability
- Topic Maps as Learning Resources
- Discovery Learning
- Scoped Vocabulary
- Merging – A Double-Edged Sword
- Expert Validation – Theory Driven
